THE VARITRANS COMFORTDRIVE GLASS PARTITION SYSTEM.

Fully automatic for more openness and flexibility.

Quick and easy frontage and showroom adaptation.

The Varitrans ComfortDrive is the fully automatic operable partition version within the Varitrans portfolio that offers even more convenience in flexible space utilisation. At the push of a button it enables interiors to be adapted quickly and efficiently to daily changing requirements, making it an ideal solution for showrooms and presen-

tation areas, foyers, shops and self-service zones in banks. With this system, multi-functional space management is a truly simple affair.

Advanced technology – the ComfortDrive operating system.

With the Varitrans ComfortDrive, transparent partition elements can be moved to their individually pre-programmed positions under

fully automatic control. The user interface takes the form of a user-friendly touch screen. Reliable safety is provided by an integrated monitoring system that stops the partition motions the moment contact is made with an obstacle.

- The benefits at a glance:**
- Fully automatic operation at the push of a button
 - Exceptional convenience with dynamic opening and closing speeds
 - Easy operation with self-explanatory touch screen
 - Combination possibilities involving several element types and partition systems
 - Reliable safety – partition stops on contact with an obstacle; TÜV/GS-tested
 - Individually programmable for custom configuration
 - Segmented and curved track layouts also possible

OPERATION MADE EASY.

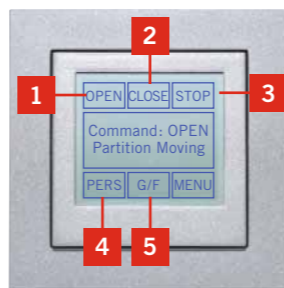

The Varitrans ComfortDrive touch screen.

Spatial management at the push of a button.

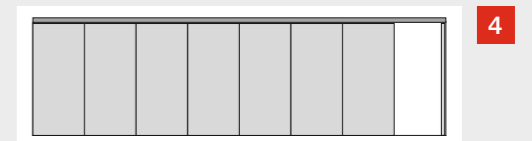

The Varitrans ComfortDrive can be controlled with just one finger operating a central touch screen. Aside from the standard functions “Open”, “Close” and “Stop”,

a number of special positioning modes such as “One element open” (“Personnel” function), “Gapped configuration” or various free positioning patterns can be individually programmed and selected.

Technical data	Varitrans ComfortDrive
Track width:	98 mm
Max. element height:	4,000 mm
Max. element weight:	250 kg
Max. number of elements:	30
Travel speed:	Dynamic response up to 250 mm/s

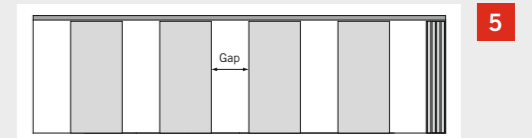

At the push of a button, the Varitrans ComfortDrive takes the partition elements straight to their pre-programmed positions.

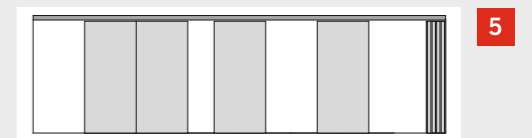

Personnel opening (optional)

In the “Personnel” opening mode, the partition only partially opens and closes. This ensures efficient personnel access based on a pre-programmable number of moving elements.

Gapped configuration (optional)

In this mode, the elements are positioned with a certain gap between one another.

Free positioning mode (optional)

The “Free positioning” function offers the possibility of placing the elements at any track location. The pattern shown here is just one of many possible configurations.
